

Accommodating Students with Diabetes

The assigned school nurse is appointed to: consult and coordinate with the parents and health care providers of students with diabetes; and train and supervise the appropriate staff in the care of students with diabetes.

The district shall develop and follow an individual health plan for each student with diabetes. Each individual health care plan shall include an individual emergency plan element. The health plans shall be updated annually, and more frequently as needed.

Parents of students with diabetes may designate an adult to provide care for their students consistent with student's individual health care plan. At parent request, school district employees may volunteer to be a parent-designated adult under this policy, but they shall not be required to participate. Parent-designated adults who are school employees shall file a voluntary, written, current and unexpired letter of intent stating their willingness to be a parent-designated adult. This letter of intent shall be available on file in the school office. Parent-designated adults who are school employees are required to receive training in caring for students with diabetes from the assigned school nurse or from a nationally certified diabetes educator. Parent-designated adults who are not school employees are required to show evidence of comparable training, and meet school district requirements for volunteers. Parent-designated adults shall receive additional training from a parent-selected health care professional or expert in diabetic care to provide the care requested by the parent. The assigned school nurse is not responsible for the supervision of procedures authorized by the parent and carried out by the parent-designated adult.

In addition to adhering to the requirements of each individual health care plan, for the general care of students with diabetes, the district shall:

- Acquire necessary parent requests and instructions for treatment.
- Acquire monitoring and treatment orders from licensed health care providers prescribing within the scope of their licensed authority.
- Provide sufficient and secure storage for medical equipment and medication provided by the parent.
- Permit students with diabetes to perform blood glucose tests, administer insulin, treat hypoglycemia and hyperglycemia, with easy access to the necessary supplies, equipment and medication necessary as appropriate and supported by students ability/maturity to manage this responsibility. This includes the option for students to carry the necessary supplies, equipment and medication on their person and perform monitoring and treatment functions whenever they are on school grounds or at school sponsored events.
- Permit students with diabetes access to necessary food and water on schedule and as needed, and access to bathroom facilities, as outlined on their individual health care plan. When food is served at school events, provision shall be made for appropriate food to be available to students with diabetes.
